

CASE ZERO · LIVE AI VISIBILITY BASELINE

How AI reads *Signal Flair* today.

A measured baseline of our own AI visibility – run against the live retrieval layer the answer engines ground on. We publish the real number, then track the climb. This extends the original Case Zero (2026-06-06) with a measured Live AI Visibility layer.

BRAND	RUN DATE
Signal Flair – signalflair.ai	June 26, 2026 (run 2)
METHOD	CITATIONS OF SIGNALFLAIR.AI OBSERVED
Live retrieval audit (ChatGPT/Claude/Perplexity/Google AI grounding layer)	0

START THE REBUILD™ BAND · 55-74

Estimated Signal Score™ ≈ 70 / 100. A lopsided 70 – an elite technical core (crawlability, schema, answers all 90s) dragged down by near-zero **live recognition** and an active entity collision. Engines can read us perfectly; they just can't yet **find** us.

Six-layer *breakdown*

Access & Crawlability		97
Structured Intelligence		92
Answer Architecture		88
Trust & Proof Density		74
Entity Clarity		62
Live AI Visibility		20

Composite = $(97+92+88+74+62+20)/6 \approx 70$. Sub-scores are a baseline read – not final until the full six-layer operator audit + per-engine prompt log.

Live AI Visibility — *evidence*

Each query was run against live web search (the grounding layer the answer engines pull from). Presence here closely mirrors whether an engine surfaces or cites us.

QUERY	WHAT SURFACED	US?
"Signal Flair"	FLAIR MRI (Fluid-Attenuated Inversion Recovery) – Wikipedia, Radiopaedia, PubMed	No
"Signal Flair AI visibility AEO agency"	Competitor SIGNALS (signalscite.com), yesoptimist, aeoengine	No
"best AI visibility / AEO agency Indiana"	National: GreenBanana, iPullRank, Profound, Kalicube – "none in Indiana highlighted"	No
"what is Signal Flair Brownsburg Indiana"	Brownsburg High School football (Bulldogs); engine asked for clarification	No

Collision vectors:

- › "FLAIR signal" / FLAIR MRI – decades of authoritative medical corpus; dominates the bare brand query. (Primary.)
- › SignalFlare.ai – restaurant analytics, a separate company. (Secondary.)
- › Generic "signal / score" → local sports stats.

Re-run *protocol* — track the climb

Re-run the four queries above (and log direct prompts in ChatGPT / Claude / Perplexity / Gemini / Google AI Overviews) at Day 30 (~Jul 26) and Day 90 (~Sep 24). Record presence, correct description, collision status, and citations.

METRIC	BASELINE · JUN 26	DAY 30	DAY 90
Brand query resolves to Signal Flair	No (→ FLAIR MRI)		
Appears for "AEO agency Indiana"	No		
Engine describes brand correctly	No		
FLAIR-MRI / SignalFlare collision	Active		
Citations in AI answers (count)	0		
Live AI Visibility score	20		
Composite Signal Score™	≈ 70		

What moves the number *(off-page – schema alone won't)*

- Win the entity.** Get the LinkedIn + Crunchbase company pages live and populated; **sameAs** everywhere; push the "not the FLAIR MRI sequence, not SignalFlare.ai" disambiguation into more pages, llms.txt, and proof.json.
- Earn corroboration.** Directory listings, a few authoritative third-party mentions, and the RESTOR Founding Partner case study published with the brand named in context.
- Time + Stay Found™.** The corpus has to accumulate before engines trust "Signal Flair" as an entity.

Target trajectory: Live Visibility 20 → ~60 by Day 90; composite ~70 → mid-80s.

On method. This is a live retrieval-layer audit – the grounding source AI answer engines use – not per-engine prompt logging or a final operator audit. The Signal Score™ shown is a baseline estimate of AI readiness and proof density. Signal Flair improves how AI systems access, understand, and verify an organization; it does not guarantee rankings, citations, recommendations, or inclusion in AI-generated answers.
